Mr. R. R. Lejeune, Officer-in-charge
Forest Biology Laboratory
409 Federal Building
Victoria, British Columbia.

Dear Ray:

Per your request during our visit, we are enclosing a list of localities and a map showing the distribution of satin moth in Oregon and Washington. The information was obtained by Pete Orr from the Hopkins U.S. File maintained by the division. This file is basically restricted to reared material, so that localities at which only observations were made would not ordinarily be listed. No doubt the insect is present in eastern Washington, but our records do not show it.

We hope that this information will serve the desired purpose.

Sincerely yours,

V. M. CAROLIN JR., Entomologist
Div. of Forest Insect Research
